SCAN RECOGNISE TREAT

BIO-ENERGETIC SCAN
APPLICATION OF COLOURED AND INFRARED LIGHT

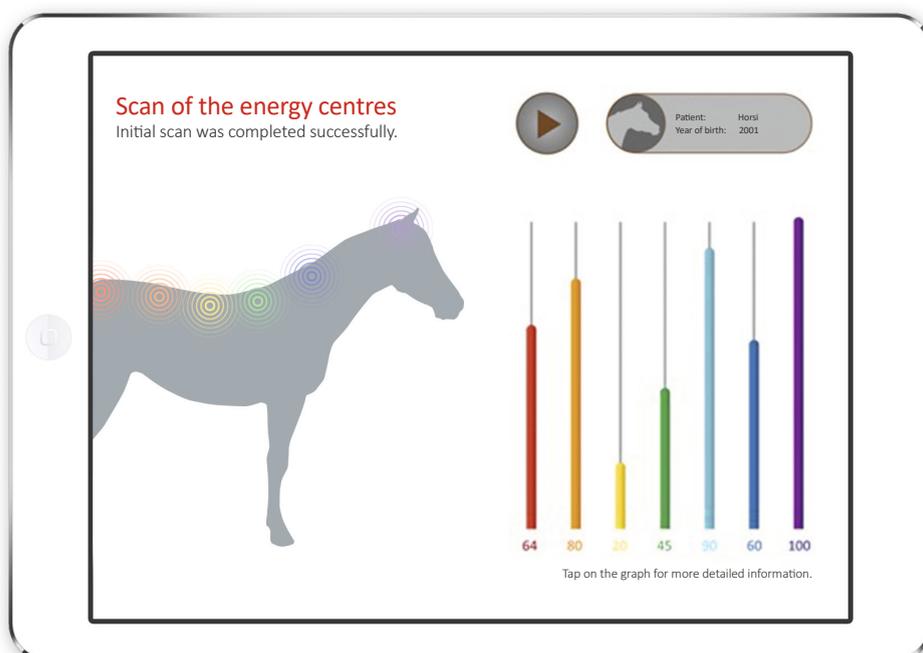

RECOGNISE AND RESOLVE PHYSICAL BLOCKAGES

Holistic understanding of performance

The EQUUSIR BEST BOX combines modern high-end technology and the latest break-throughs in quantum physics with a holistic body concept of the energy centres. The application aims at fulfilling the requirements of a modern performance management: Preserve physical health long-term and continually increase athletic performance at the same time.

The bioenergetic measurement in the EQUUSIR BEST BOX determines the current condition of the body's energy flow. A detailed report visualises how well the individual body areas are supplied with energy and which areas show blockages.

The report is followed by a first application of colour and infrared light. The initial application will show which dysfunctions of the energy flow can be eliminated in the short term and what blockages require a long-term application.

Basic information on performance

The performance of a sport horse is influenced by many factors that closely correlate with each other. The basic information made available by the bioenergetic scan is the key to understanding performance. As a prerequisite, this requires the treating veterinarians and therapists to use the information in supplement to their diagnosis and therapy. Only then can incorrect physical stress be recognised and treated in its earliest stage.

IN SYNC WITH THE ENVIRONMENT

The EQUUSIR BEST BOX is exclusively intended for the restoration and harmonisation of the horse's own energy fields. The EQUUSIR BEST BOX does not represent a medical treatment in the traditional veterinary sense. The bioenergetic application only serves as a supplement to the veterinary diagnosis and treatment, but has not been recognised by conventional veterinarian medicine.

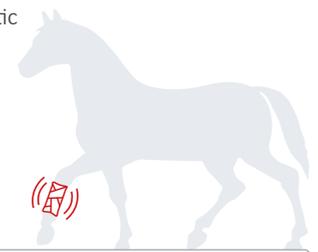

USE IN THERAPY AND TRAINING

Long-term preservation of physical health (THERAPY)

Health, in the narrowest sense, is the absence of disease. For a sport horse, this means that the horse despite physical strain caused by training and competition will not experience long-term physical damage.

The higher the performance demands, the greater and more comprehensive the impact on the performance of even minor complaints. The resilience of an organism depends on many factors: regeneration ability, condition of the immune system, activity level of the metabolism or the ability to mobilise the self-healing powers.

If the energy centres are balanced and harmonised, the body is healthy. Blockages initially arise in the energetic field and only manifest themselves in the form of physical problems after some time. Bioenergetics takes up these findings in a scientific way.

SUPPORTING THE DIAGNOSIS

External symptoms may have non-visible causes, as suggested by disharmonies in the energy fields.

MONITORING OF THERAPY MEASURES

The physical efficacy of measures can be made visible.

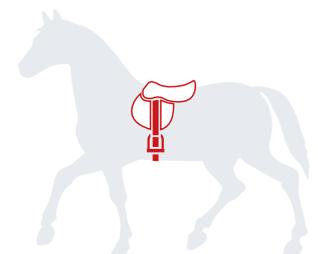

Sustainably improve athletic performance (TRAINING)

A healthy horse is the prerequisite for any athletic training. When the horse's health is assured, the training aims to continually inch the resilience toward the performance limits of the horse and beyond.

Bioenergetics tells us that two areas are closely interrelated:

Body and behaviour (the spirit).

A positive influence on the training condition is achieved when both areas (body and behaviour/spirit) are equally trained. An equilibrated energy balance ensures that physical resources are used, but not exhausted.

TRAINING OF THE BODY

The mechanism of the body, such as muscle build-up, metabolism, cardiovascular system.

TRAINING OF BEHAVIOUR (SPIRIT)

The individual behaviour, such as concentration, willingness to perform, stress level, willingness to learn.

Equilibrated supply of the energy balance

When EQUUSIR talks about the energy flow in the body and balanced energy fields, it means to include complex, biochemical, physical, and subtle processes. The applications affect important metabolic processes and the control through the central nervous system. The high-quality and targeted energy supply occurs in various energy forms, compiled from various individual results of the initial scan.

The focus of this process is on strengthening the cell energy¹: When dealing with disease and complaints, this will support the physical healing processes and increase the performance potential in training. The starting point of any diagnosis and application is always the energetic condition of the individual body areas, which are measured and evaluated for subsequent custom-tailored treatment.

Frequent problem areas of sport horses

The application of the EQUUSIR BEST Box ranges from ambitious competitive sport to supporting valuable breeding and ensuring the well-being of leisure horses. Owing to its quick and comprehensive measuring ability, veterinarians use the scan reports as a tool in the examination of acute and chronic diseases. Riders appreciate the contribution to the physical and mental regeneration during training or competition.

ALLEVIATING ACUTE SYMPTOMS

Problems with skin, hoof, muscle, and joint diseases, tendons, cough, bronchitis, rheumatism.

RECOGNISING CHRONIC DISEASES

Skin diseases, cough, broken wind, tendon-blockages, bronchitis, rheumatism.

RECOGNISE WEAK POINTS PREVENTIVELY

Broken wind, colics, detoxification problems, metabolic disorders, strengthening, and stimulating the blood and lymphatic vessels; build-up of the immune system; pulmonary, cardiovascular, and hormone systems.

LOOSENING OF BLOCKAGES

Muscle tensions, blockages in the spinal column, increase of performance and mobility, strengthening of the muscle and locomotor systems, fascia, connective tissue.

REGENERATION AFTER STRESS

After intense stress or injuries: detoxification and lactate breakdown in the muscles, inflammation inhibition, wound healing, pain relief, and stress reduction.

¹⁾ Cell energy: The energy available in the cell to fulfil the cell function.

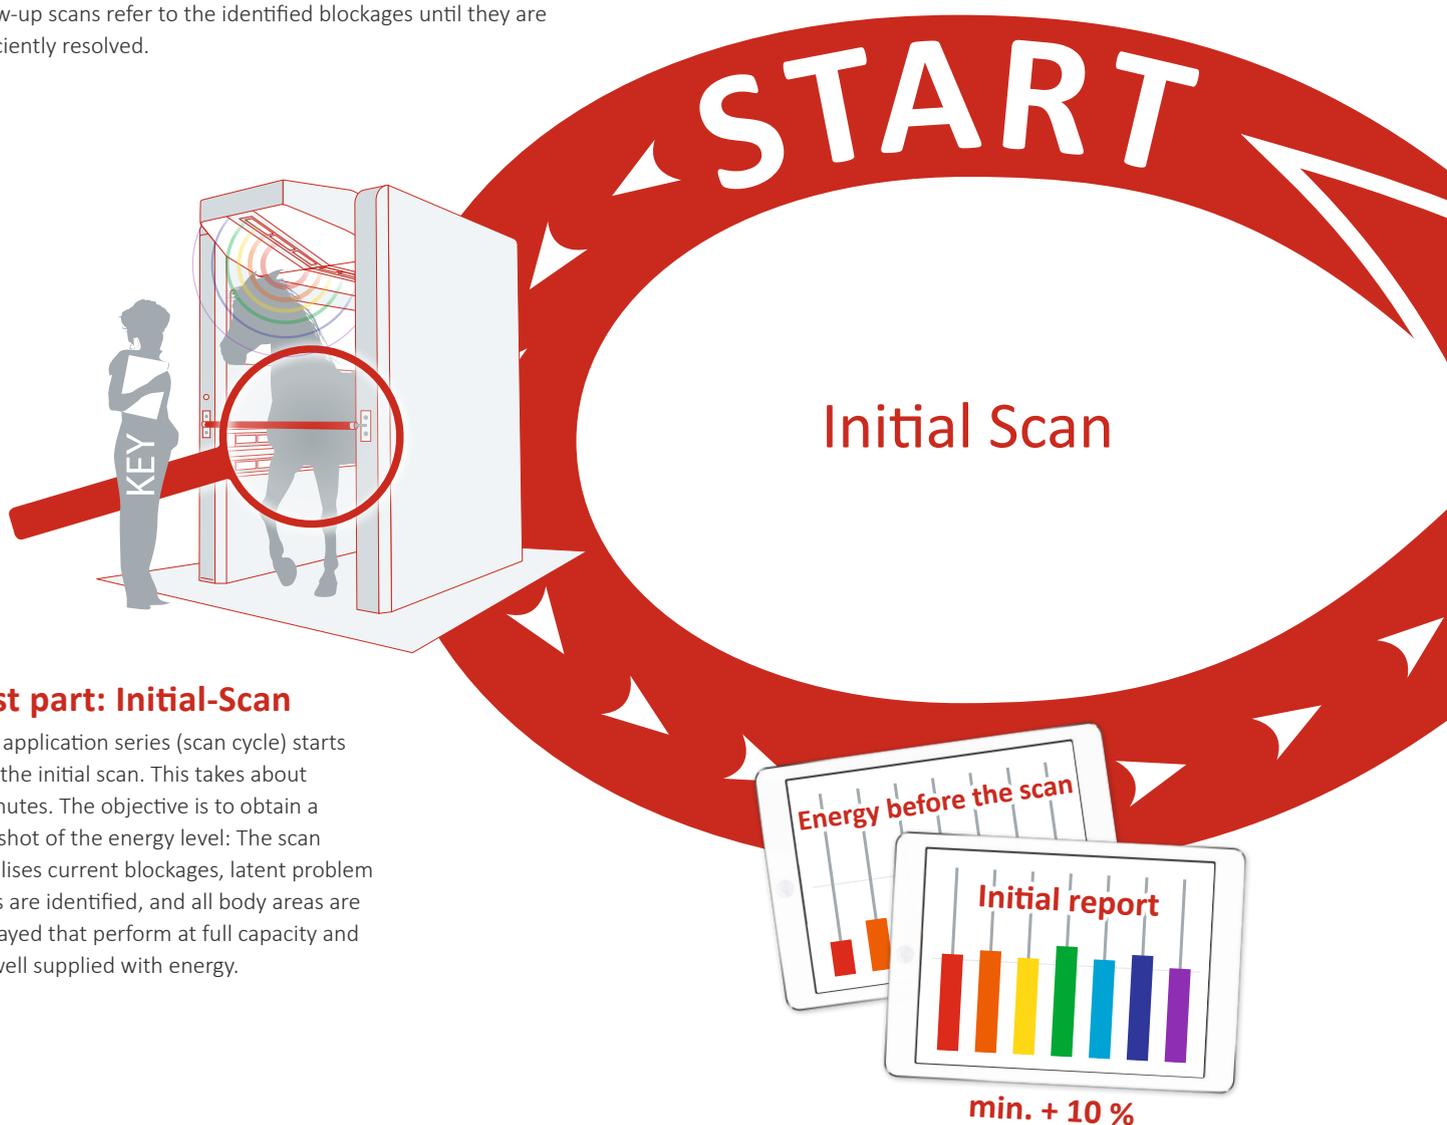

SEQUENCE OF AN APPLICATION SERIES (SCAN CYCLE)

Starting point: Scan Cycle

A scan cycle consists of an initial scan, including an initial report, an immediately following first application and a follow-up report. The next day, another application is performed which is concluded with another follow-up report. Ideally, three applications should be performed on three consecutive days, then a one-day break followed by another series of three days with one application each.

The initial scan is performed as a reference, while the subsequent follow-up scans refer to the identified blockages until they are sufficiently resolved.

The initial scan measures the current state of the energy flow and represents it graphically. The follow-up scan compares in which areas self-regulation has taken place or which blockages are of a more deep-seated nature. Once most of the blockages are resolved, a new scan cycle is started.

First part: Initial-Scan

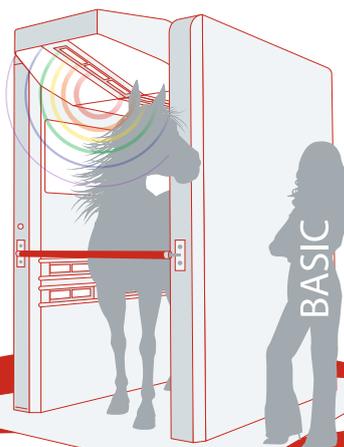

Each application series (scan cycle) starts with the initial scan. This takes about 2 minutes. The objective is to obtain a snapshot of the energy level: The scan visualises current blockages, latent problem areas are identified, and all body areas are displayed that perform at full capacity and are well supplied with energy.

Second part: Initial report

The report is structured according to the seven energy centres. For easier orientation, a different colour has been assigned to each energy centre. On the first page, the report shows the current condition of the energy flow expressed as a percentage-based evaluation. 0% would signify that the energy flow is completely blocked; 100% means the energy can flow completely unimpeded. The following pages indicate in greater detail the anatomical areas with a disturbed energy flow.

Third part: Application

Following the initial scan, the first application is started: This will normally take 20 minutes. The initial scan creates an important basis for the continuous improvement of the energy level by differentiating already resolved blockages from the currently existing ones. The result is shown in the subsequent scan (duration: 2 minutes) which contains the important conclusive data about the horse's energy balance.

NOTE: RESTIVE HORSES

In rare cases, horses are very restless during the initial scan. If this is the case, we recommend a short application of 2 minutes in order to keep the perceived stress at a minimum. With every application running, even sensitive horses will accept the unfamiliar influences of light and warmth in an increasingly relaxed manner.

Follow-up Scan

End of the scan cycle

The EQUUSIR BEST BOX automatically completes a cycle and proposes the start of a new scan cycle, if either 28 days have passed since the initial scan or all energy centres have reached an energy level of more than 95% (relative to the starting point of the initial scan).

Fourth part: Follow-up report

The follow-up report after the application is structured in the same manner as the initial report: It shows the energy level in each energy centre as a percentage and the details of all anatomical areas.

The follow-up scan records the current condition in reference to the initial scan. This scan measures the progress made in the energy supply in relation to the blockage of the initial scan.

EFFECT IN THE PERFORMANCE MANAGEMENT

Three roles in the performance management

1

KEY USER

Controls the scan cycle

An application series (scan cycle) consists of several applications. The number depends on the condition of each horse. It is therefore important that the application series is set by an experienced user (KEY USER) who takes the horse's overall health condition into account.

2

BASIC USER

Performance of daily applications

The individual applications and follow-up scans can be started and monitored by one of the horse's caregivers (BASIC USER). It is IMPORTANT that the horses are not left alone during the application, since some horses are getting restless when their physical blockages are starting to resolve.

3

VETERINARY PROFESSIONALS AND THERAPISTS

The Interpretation of the reports

While the initial and follow-up scans may also be applied by medical laymen, the interpretation of the reports and the deduction of effective measures require the professional knowledge of certified EQUUSIR-BEST-therapists or qualified veterinarians.

Effect on the communication of body cells

Information exchange between cells

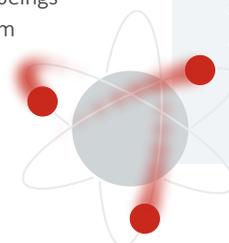

The bio energetic scan & therapy (BEST) Box works as energetic course of treatment with the frequencies (vibrations) of the patient's own body: Biophysics tells us that the biochemical processes in the body are controlled by an electromagnetic energy field. This energy field envelopes and penetrates animal and man.

Light can be imagined as a stream of tiny portions of energy, called photons. Research has shown² that the DNA is some kind of "electromagnetic antenna" that receives information in order to pass it on to our cells³. Photons maintain communication between all living beings and the cells of living beings by radiating a phase-stable light, i.e. a very even and calm light, which shines stronger or weaker, depending on the condition of the cell.

i

WHAT IS A PHOTON?

The photon (derived from the Greek word φῶτος (phōtos or "light") is the smallest quantity of electromagnetic radiation of a specific frequency, also referred to as light quantum or light particle. Each photon has energy and moves with the speed of light. Photons have a mass and an impulse. They are formed in the atomic shell by quantum leaps.

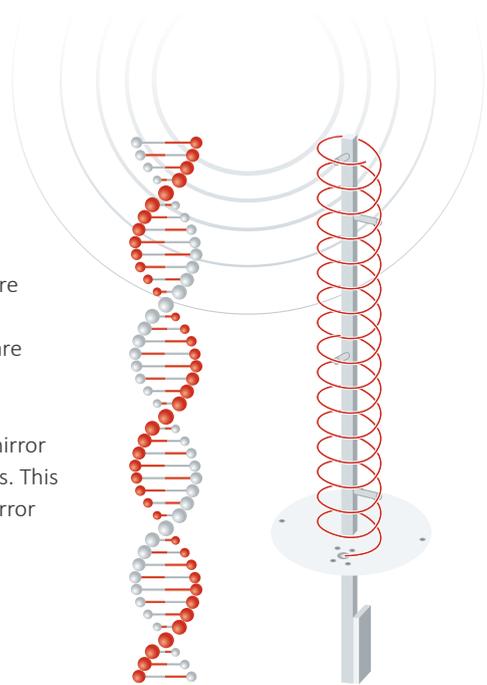

²⁾ In particular the works of the German physicist Popp. ³⁾ cf. 'The Biology of Light'. Publisher: Marco Pietteur.

Measuring and visualising an electromagnetic energy field

With the EQUUSIR BEST BOX, the following electromagnetic vibrations/frequencies are measured. The frequencies can be subdivided into physiological (good, normal) and pathological (abnormal) frequencies. Since the vibrations in the EQUUSIR BEST BOX are generated situationally, they can be adapted individually to each patient.

The pathological vibrations/frequencies in the organism can be switched inversely (mirror inverted upside down), causing a weakening or a quenching of pathological vibrations. This fact is based on the physical law that two vibrations/frequencies that are an exact mirror image of each other, weaken or quench each other.

Stationary or mobile use

The EQUUSIR BEST BOX is installed to be stationary in the stable. The horses are treated touchlessly in their familiar environment. The control is exercised through software operated via a tablet which is mounted on the side panel of the box.

The EQUUSIR BEST BOX is also available as a mobile trailer or van.

For more details see www.equusir.com

Simply lead the horse into the box

The horse is lead into the box head first. During the application, the horse stands in the box secured with a breast bar. Both the analysis-measurement and the infrared (deep heat) and colour light application are performed touchlessly, non invasive (penetrating). Following the therapy, the horse is guided out of the Box, head first.

COLOUR & INFRARED LIGHT:

Patented colour radiator on the basis of sophisticated LED technology;
380-780 nm
infrared (deep heat)
with high-quality ceramic radiation units;
starts at 1,400 to 3,000 nm

REQUIREMENTS:

Frost-free and dry interior space!
Do not install in moist environments
and near horse washing stations!

CONNECTION:

Heavy-current connection,
400 Volts, 16 Amps

HEIGHT:

2,550 mm

WIDTH:

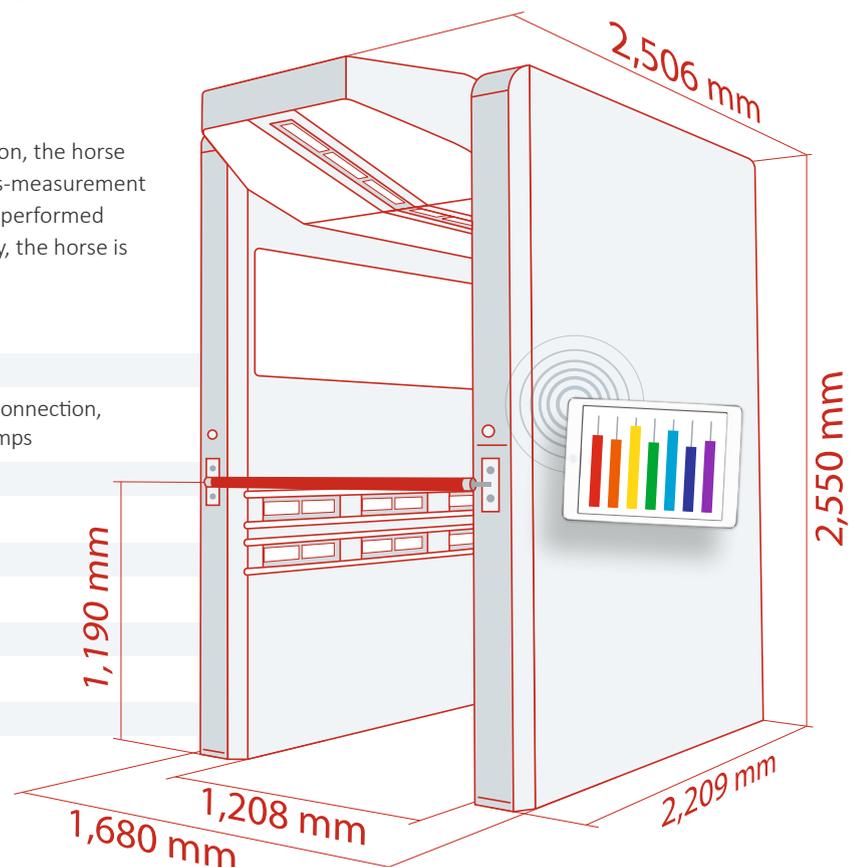

1,680 mm

DEPTH:

2,506 mm

WEIGHT:

approx. 700 kg

BRINGING CELLS INTO THE RIGHT VIBRATION

Light acts in the cell nucleus

Scientists such as Fritz A. Popp examine the question how the human organism and all other biological systems work, how they are supplied with energy and how the communication between the cells functions. For Popp, the key to communication of all living beings is light. Research supported by 1700 experiments has demonstrated that the DNA of the living cell can communicate with the DNA of the neighbouring cells by transmitting energy and information in the form of light⁴. This light is generated by the movement of photons.

The effect of photons

If energy in the form of light or warmth is supplied to an atom, valence electrons achieve an energetically higher state. The valence electrons do not remain in this higher state of energy. They revert back to their original state within a very short time (approximately within ten billionths of a second) and without any external influence. In doing so, they release the energy that they previously absorbed in the form of light.

HEALTH IS ADAPTABILITY

Health is the ability of the organism to regulate itself at any time. The organism reacts constantly, sensibly, and flexibly to all challenges presented by environmental signals and thus ensures its proper functioning. The integration of these stimuli causes the organism to constantly develop. The cells, cell groups, body tissues, and organs exchange information through vibrations, resulting in an individual vibration pattern.

DISEASE IS DISHARMONY OF VIBRATION

Cells that have fallen out of their physiological vibration are the cause of disease and physical discomfort. Disease has its own vibration/frequency. Each disease, in addition to the associated tissue changes, metabolic disorders or subjective discomfort, always means a disorder in the information exchange of the body cells amongst themselves.

⁴⁾ Leonard Laskow, *Healing with Love*

The body reacts in split seconds to a signal that is useful for the body because it comes into resonance with them.

Informative Medicine, 1999

Dr. W. Ludwig

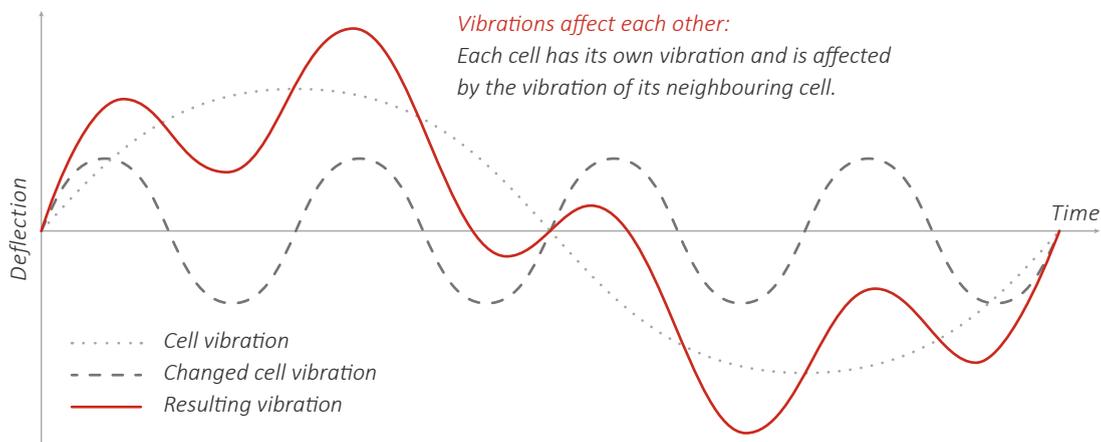

Light activates self-healing powers

The Indian colour light researcher Dinshah Ghadiali⁵ compares the body with a prism. The cells split the light into its basic components and utilise the light energy that is required for their energetic balance. In the EQUUSIR BEST BOX we take advantage of this principle in two respects:

1. *Compensate for any energy deficit (= photon deficit)*
2. *Remove disruptions of the cell communications (in the vibration/frequency area)*

Living cells normally emit a continuous photon flow. If a virus invades a cell, it changes the photon flow.

Each physical or psychological trauma causes a disorder, disturbance or an interruption in the flow of energy, causing the cell receptors to lose the information which is the manifest indication of "disease". Countermeasures aim to restore this information and to recalibrate the cell. Then the cell is able to regain its balance on its own and the organs have the opportunity to fulfil the tasks assigned to them.

PROVIDING ENERGY IN THE FORM OF INFRARED

If the cell is exposed to photon flows, the access to the cell is facilitated. In this case, the cell functions as a relay for its neighbouring cells, which in turn function as a relay (comparable to a switch) for their neighbouring cells and so on. Thus, order can be restored at all disturbed points or points which impact vibration balance.

SUPPLYING VIBRATION IN THE FORM OF COLOUR LIGHT

Both the photon energy supply and the entire frequency spectrum of visible colour rays offer an excellent measure, since each change of a vibration/frequency triggers a chain reaction of vibrations and vibration changes. Colour light can exert a positive resonance effect on cells and prevent the spreading of false vibration potentials to the environment.

⁵⁾ The Indian physician Dinshah P. Ghadiali (1873 -1966) has established the first comprehensive colour-light therapy system. Much of what is known about the effects of colours in modern colour therapies has been established by Dinshah's research.

QUANTUM PHYSICS EXPLAINS THE EFFECT

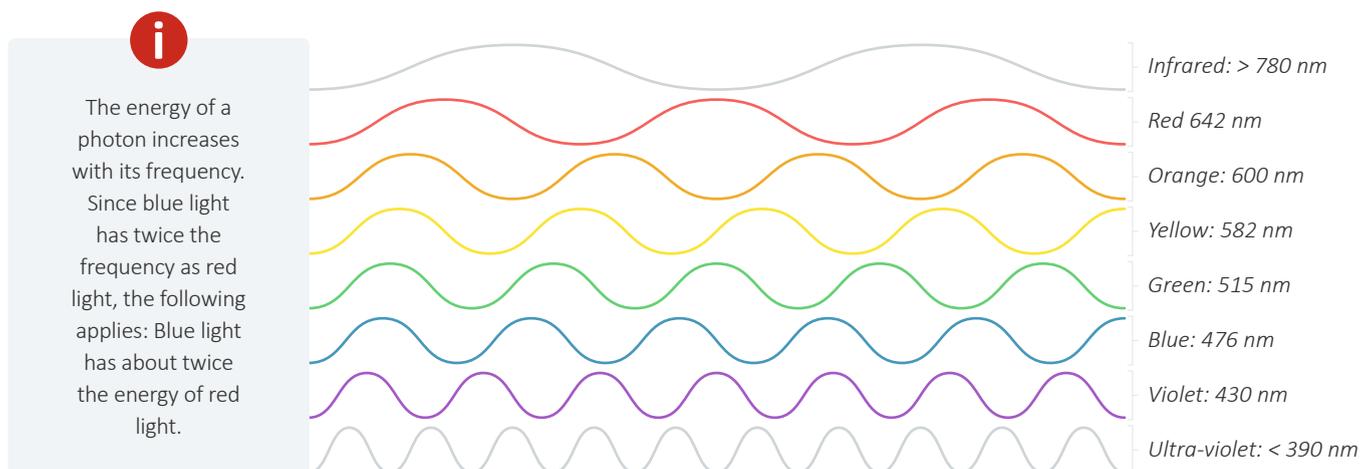

Light is wave and particles

At the beginning of our century, Albert Einstein postulated the theory at the Max Planck Institute, that light is composed of tiny energy packets (quanta⁶), which are absorbed and released again by matter. Light has both a particle and a wave aspect. It depends on the type of measurement whether light shows itself as particles (photon) or as a wave. By definition, a particle is something localised, a wave that has shrunk into a point, as it were, while the wave is characterised by its spatial expansion.

The language of cells

After having conducted more than 5000 experiments, the Soviet scientists Semjon P. Schurin, Wlail P. Kasnatschejew and Ludmilla Michailowa confirmed that living cells transmit information by photons.

Living cells normally send out a continuous photon flow. Photons are suited to provide us with information very quickly and to reveal the presence of a virus before it comes to a harmful degeneration.

LIGHT AS PARTICLE

Photons are quanta of light, the physically smallest elements of light. Prof. Fritz Popp speaks of bio-photons, when photons do not originate from sunlight, but are released by living cells.

Due to their ordered state, photons can advance to the cell nucleus. The cell nucleus with all its life information is the most important recipient of the (bio) photo energy and its information (frequency).

LIGHT AS WAVE

Researchers all over the world have confirmed in countless experiments that body cells give off light. It appears that this light maintains some sort of radio communication, whose signals pass on information in the organisms of plants, animals, and humans controlling biological processes at a far greater speed and efficiency than what is possible through biological channels.

⁶ Quantum = particle which is generated by a change of state (mostly energy).

Cells that are attacked by various diseases or aggressors display different radiation characteristics.

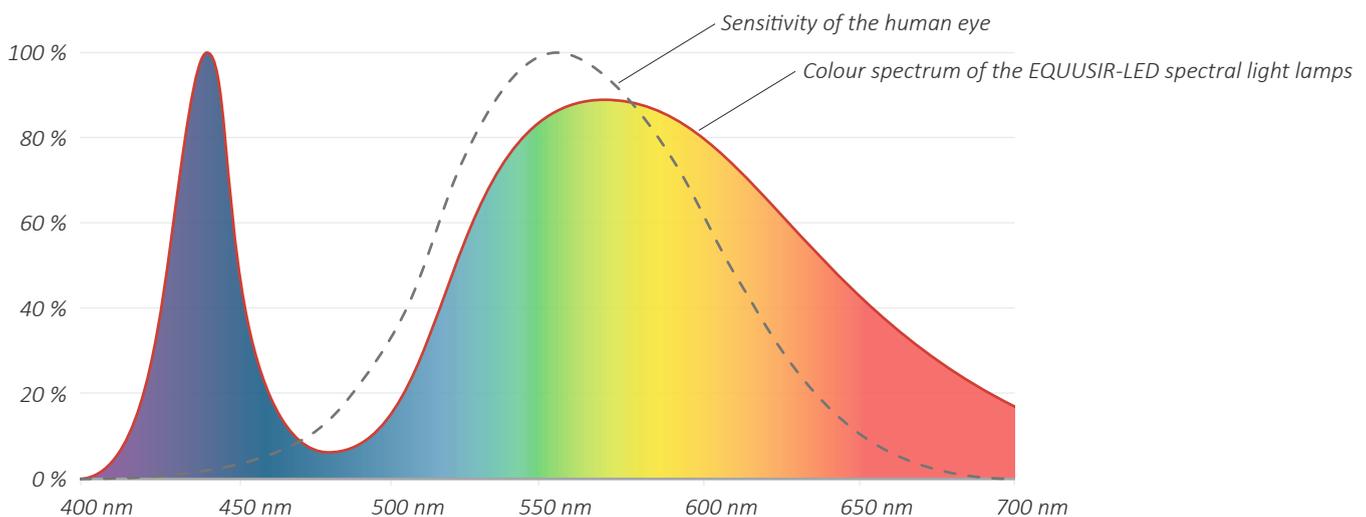

Russian scientist
Semjon P. Schurin⁷

Removing regulation rigidity

Actual disease only arises when the organism can no longer manage the disorders on its own, when it can no longer re-adjust them.

- *A healthy organism is held together by the photon field as a flexible entity: its receptivity for signals from the environment and its ability to adapt to these signals, which it uses for stabilisation, are at a maximum.*
- *The sick organism, however, can no longer react optimally to such signals: it is not capable of learning and is destabilised by them. Measurements have pointed out this regulation rigidity and shown that the electrodynamic field is more dynamic in healthy individuals.*

COLOUR SPECTRUM OF THE EQUUSIR-LED-SPECTRAL LIGHT LAMPS

ABSORB VIBRATIONS

The photon owes this extremely high regulation ability to its high speed, meaning light speed of approximately 300,000 kilometres per second. Each disturbance of the photon field spreads with the speed of light across the entire organism and thus regulates the system by means of feedback and also structures it in this way.

CHANGE AND FEEDBACK VIBRATION

However, since the order in any system is not maintained by itself, individual photons must continually report any disorder that arises to the outside. Because of this constant energy consumption it is extremely important that the cells are continually supplied with energy (by photons).

⁷⁾ In a series of more than 5000 experiments, the Russian scientists Wlail P. Kasnatschew, Semjon P. Schurin and Ludmilla Michailowa from the Medical University of Novosibirsk demonstrated that cell communication on the basis of electromagnetic waves, the photons, takes place in the ultraviolet range.

THE HORSE AND ITS STAFF IN BALANCE

A new form of performance management

In competitive sports, we pursue two goals:

To sustain the long-term health of the sport horse and simultaneously and continuously push the performance limits.

With the EQUUSIR systems BEST BOX, BIOS, and BIONIC we support you in therapy, as well as in the training and in the tournament mode.

By working specifically with high-quality energy forms (for example infrared, colour light or electromagnetic impulses), it is possible to uncover the causes of the physical complaints. At the same time, preventive measures can be taken to avoid consequential damage.

The horse should be able to retrieve its physical resources in an optimal way.

Bioenergetics as scientific basis

Bioenergetics focuses on the subject of energy conversion in living structures:

In other words, how the cells are supplied with energy and how the individual controls the conversion of the energy into performance.

The natural energy balance ensures that an individual can retrieve the potential of his physical and psychological resources. Optimal performance behaviour is reflected when the physical resources are fully available. Tensions, blocked joints or, for example, digestive problems inhibit performance.

IN THERAPY

All EQUUSIR systems are designed to support the healing processes by equalising the energy balance. BIONIC regulates the acid-base balance, BIOS controls the activity level and the BEST BOX facilitates an exact localisation of blockages and their step-by-step removal.

IN TRAINING

A healthy horse is the prerequisite for any athletic training. THE EQUUSIR systems help to exceed performance limits and to secure the optimal training effect by applying the correct regeneration. Physical mechanisms such as muscle build-up, metabolism, cardiovascular and lymphatic systems and individual behaviour such as concentration, willingness to perform and stress level, can be specifically influenced by it.

In a muscle enzyme study with race horses that I accompanied, it was demonstrated that the regular use of the EQUUSIR BEST BOX helps horses to regenerate faster.

FEI Treating Vet and experienced horse show veterinarian
Mag. med. vet. Christian Tanczos

The EQUUSIR BEST BOX examines, if the energy flow is disrupted and dissolves blockages.

Founder, EQUUSIR Research & Development
Gerold Reinwald

PHYSICAL RESOURCES

These mechanisms are measurable and graphically representable.

The physical potential is dependent on the energy in the body. If the natural flow of energy is blocked, the full performance potential can no longer be fully utilised. Muscular tensions, irregular breathing and digestive problems are the result.

BIOENERGETICS IS THE KEY

Bioenergetics makes a new form of performance increase possible. Using physical and mental resources without consuming them.

MENTAL RESSOURCES

The individual behaviour is observable and experienceable.

An attentive rider knows the mental problem areas of his horse. Deficient concentration, lack of willingness to perform and disobedience will directly affect the performance. However, physical discomfort is frequently behind the ostensibly incorrect behaviour.

In the scientific study on the effect of the EQUUSIR-BEST-BOX, carried out in 2017, we were able to demonstrate positive effects on the vegetative nervous system.

Veterinarian / Institute for Experimental and Clinical Pharmacology MedUni Graz

Mag. med. vet. Georg Racic

PROMOTE PERFORMANCE ALL AROUND

THE BEST FOR YOUR HORSE

Whether in therapy or in training: BIONIC, BIOS, and BEST BOX support the horse and its staff in the performance management.

EQUUSIR BIOS BIO STIMULATION SYSTEM

TARGET-SPECIFIC CONTROL OF THE RIDER'S STATE OF ENERGY

Human concentration and performance capability are also controlled autonomously through the vegetative nerve system. In order to bring the vital function and the hormone system into the correct performance state between tension and relaxation, the **EQUUSIR-BIOS vest** delivers the correct electromagnetic impulses.

EQUUSIR BIOS BIO STIMULATION SYSTEM

TARGET-SPECIFIC CONTROL OF PERFORMANCE

Whether increasing the concentration before the start of a show, for relaxation after a transport or for activation prior to daily training: Vital functions such as blood pressure, muscle tone and breathing determine whether the body of a horse is ready to perform or is able to regenerate. The natural control is exerted via the vegetative nerve system, target-specifically influenced by the impulses of the **EQUUSIR BIOS blanket**.

EQUUSIR BIONIC 100% NATURAL HORSE CARE

DISINFECTING, REGENERATING AND MAINTAINING

The **EQUUSIR BIONIC** care products are based on electrolytically polarised mountain spring water and can penetrate to the cell level. They destroy harmful germs and pathogens from the inside and act on the acid-base balance of the cell. They are manufactured in a highly specialised electrolysis process and are completely free of side effects.

Simply order online

The world of EQUUSIR is just a click away. Many field reports and detailed studies will give you a deeper insight into our work for the horse and its staff.

Find out more and get to know the effect first hand. Many of the EQUUSIR products are available through our website.
